

# Morgan

## Turf Type Tall Fescue

Morgan illustrates all of the benefits you expect from a turf type tall fescue. It has a fine leaf texture, slow growth rate, excellent disease resistance and a rich dark green color. In addition to this, Morgan is very resilient and can thrive under the most demanding conditions.

Morgan was selected to stand out even with limited water, fertilizers and chemicals. It will perform under high temperature, drought and heavy wear conditions. Morgan requires less water than bluegrass and ryegrass.

Use Morgan as a stand alone cultivar or in two and three way blends. It will quickly establish a thick and lush turf which will help crowd out weeds. To get the most from your blends chose other varieties that match the rich dark green color and finer leaf texture.

**Planting Rate:** 7-10 pounds per 1,000 sq. ft.

**Germination:** 9-14 days under normal conditions. For best results seedlings should be kept watered until roots have been established.

**Mowing Height:** 2-3 inches.

Recommended for quality lawns, golf course applications, parks, playgrounds and sports fields or any other areas suited for high quality low maintenance turf.
